- D. Both a and b

Note: REPRODUCTION DEFECT: the stem contradicts itself — 'raised' describes a superscript, 'below the baseline' describes a subscript. The operative clue is 'below the baseline', which is a subscript (a character smaller and set below the baseline); the second test360 reproduction keys the same answer ('Subscript'). The 'raised' is a transcription error and is recorded, not silently fixed.

Question 73 Computer Science

Which of the following is not a valid data type in Excel ?

- A. Label
- B. Number
- C. Date/Time
- D. Character ✓ **Correct answer**

Note: Excel's data types include Number, Date/Time and Text ('Label' is the old Lotus-style name for a text entry). 'Character' is not an Excel data type, so it is the correct answer; the Scribd recall for this paper also answers 'Character'. (Note: 'Label' is also not a standard Excel type name, which makes the item awkward — but 'Character' is the conventionally keyed answer and the only one the second reproduction confirms.)

Jizya is what kind of text

- A. Property tax
- B. Tax on Muslim
- C. Pool Text on non Muslim ✓ **Correct answer**

Jizya is a poll tax on non-Muslims (the second reproduction prints the stem cleanly as 'Jizya is what kind of tax?' and keys 'Poll tax on non-muslim'). It is not a property tax, a tax on Muslims, or an agricultural tax.

- B. قمیض
- C. اساتذہ

- A. ناراضگی ✓ **Correct answer**
- B. ناراضی
- C. قمیض
- D. اساتذہ

Note: املا کے اعتبار سے 'ناراضگی' درست نہیں — اردو املا کے قاعدے کے مطابق درست لفظ 'ناراضی' ہے (رشید حسن خان کی 'اردو املا' اور متعدد املا کی کتابوں میں 'ناراضگی' کو غلط اور 'ناراضی' کو درست بتایا گیا ہے؛ ریختہ ڈکشنری بھی اس بحث کو درج کرتی ہے)۔ ناراضی، قمیض اور اساتذہ درست ہیں۔ Note: some modern writers defend ناراضگی on usage grounds (رائج Shamsur Rahman Faruqi, quoted by Rekhta, notes it is); the exam follows the prescriptive rule, so the printed key stands.

Question 92 Mathematics

ax+2y=5 3x-6y = 20 in the system of equation above a is a constant . If the system has one solution which of the following not be the value of a ?

Correct answer

- B. 2
- C. 0
- D. 1

Note: The system ax+2y=5, 3x−6y=20 has one solution unless the lines are parallel, i.e. unless a/3 = 2/(−6) = −1/3, i.e. unless a = −1. So a cannot be −1; 0, 1 and 2 all give one solution.

Question 93 Mathematics

If x2a/b defines X .

- A. b√x²a ✓ **Correct answer**
- B. 2ab√x
- C. 2ab√x
- D. b(x)2a

Note: REPRODUCTION DEFECT: superscripts were lost in the rendering — the stem is 'If x^(2a/b) defines X'. By the index laws x^(2a/b) is the b-th root of x^(2a), i.e. b√(x^2a), which is option A. The other options do not express that root.

Question 94 Mathematics

The sum of the ages of two brothers is 12 . If one of them is older than the other by 2 years . What are their ages .

Question 95 Mathematics

Four man working together can dig a ditch in 42 days . They begin but one man works only half days . How long will it take to complete the job ?

- A. 44
- B. 48 ✓ **Correct answer**
- C. 38
- D. 42

Note: Four men take 42 days, so the job is 4×42 = 168 man-days. With one man on half-days the gang works at 3.5 men per day, so 168/3.5 = 48 days. 38, 42 and 44 are wrong.

Question 96 Mathematics

A dish washer cleans 1350 dishes in 1 hour . How many dishes will it wash in 16 more minutes ?

- A. 1350
- B. 1710 ✓ **Correct answer**
- C. 1242
- D. 1412

Note: The dishwasher cleans 1,350 dishes per hour, i.e. 22.5 per minute. In 16 more minutes it cleans 16×22.5 = 360 more, so the total is 1,350+360 = 1,710 dishes. 1,242 and 1,412 are wrong.

Question 97 Mathematics

The angle of depression of a points situated at a distance of 70 m from the base of the tower is 60 degree . The height of the tower is :

- A. None of these

3 m

- C. 70 m
- D. 70√3m ✓ **Correct answer**

Note: tan 60° = height/70, so height = 70×tan 60° = 70√3 m. 35√3 m and 70 m are wrong; the second test360 reproduction keys the same value (printed there as '70/3m' with the root sign dropped).

Question 98 Mathematics

If the area of a circle is equal to the area of square with side 2√π units , what is the diameter of the Circle ?

- A. 8
- B. 4 ✓ **Correct answer**
- C. 1
- D. 2

Note: The square has side 2√π, so its area is $(2\sqrt{\pi})^2 = 4\pi$. The circle has the same area: $\pi r^2 = 4\pi$, so r = 2 and the diameter is 4. 8, 1 and 2 are wrong.

Question 99 Mathematics

If a+b+c= 0 then write the value of (a+b/c + c+a/b + b+c/a+b) ((b+c)(c+a)/a+b + (a+b)(c+a)/b+c + (a+b)(b+c)/c+a)

- A. 9
- B. -9 ✓ **Correct answer**
- C. 0
- D. ab+bc+ca

Note: REPRODUCTION DEFECT: the superscripts and some parentheses were lost when the site rendered this item (the same defect as Q93, where 'x^(2a/b)' prints as 'x2a/b'), so the stem must be reconstructed from the printed pieces — and the reconstruction is

e printed key and the standard identities. Read the first bracket as (a+b)/c + (b+c)/a + (c+a)/b: since a+b+c=0, each term is −1, so the bracket is −3. Read the second bracket as the matching sum of squared terms over products — $(b+c)^2/bc + (c+a)^2/ca + (a+b)^2/ab$ — which equals 3 when a+b+c=0 (standard identity, $a^3+b^3+c^3=3abc$; testbook.com works the identical problem to 3); the printed numerators (b+c)(c+a), (a+b)(c+a), (a+b)(b+c) are exactly the numerators of the equivalent form (b+c)(c+a)/ab + (a+b)(c+a)/bc + (a+b)(b+c)/ca, each term of which is 1, again summing to 3. Either reading gives (−3)×3 = −9, which is the printed key B. Checked numerically: for (a,b,c)=(1,2,−3) and (2,3,−5) both readings give exactly −9. The answer is therefore VERIFIED by computation; the garbled rendering is recorded here, not silently fixed.

Question 100 General Knowledge

Rakaposhi is located in which mountain range?

- A. Himalayas
- B. Karakoram ✓ **Correct answer**
- C. Hindu Kush
- D. Pamir

Note: Rakaposhi is in the Karakoram range (it is one of the Karakoram's great peaks, above the Nagar valley). It is not in the Himalayas, the Hindu Kush or the Pamir. This item is Q100 of this paper: it is absent from the primary reproduction but is carried by BOTH second reproductions — the test360 model paper for this same case/date keys B 'Karakoram', and the Scribd candidate-recall compilation for this paper answers 'Karakorum range'. Its original position number in the paper is NOT established (see the True Total section), so it is placed here as Q100 following the 37gx precedent; nothing about the stem, options or key has been invented.
