START, SALT I and SALT II were arms-control treaties that managed deterrence rather than undermining it. No independent source beyond the two reproductions was found for this exact formulation, so the answer is included but flagged SINGLE-SOURCE.

In a fever, inflammatory signals (cytokines) act on taste-bud receptors and disrupt the nerve signalling that carries taste to the brain, so taste is blunted. Taste buds are not destroyed, not dead, and not 'covered' — those three options are physiologically wrong. The mechanism is disruption of taste-nerve signalling, which is what option C states in the bank's wording.

'Unanimously' means with everyone's agreement, without dissent; of the four options, 'unquestionable' (not open to doubt or dispute) is the closest in sense. Which characteristic of human distinguish him from computer ?

- A. Storage
- B. Intelligence ✓ **Correct answer**
- C. Efficiency
- D. Consistency

Note: SINGLE-SOURCE: the printed key is B, 'Intelligence', and the model-paper reproduction keys the same answer text. The bank's framing is that computers match or exceed humans on storage, efficiency and consistency, while general intelligence — understanding, judgement, creativity — is the distinguishing human trait. The answer rests on that wording convention rather than a checkable fact, so it is included but flagged SINGLE-SOURCE.

Question 75 Computer

An excel workbook is a collection of :

- A. Charts
- B. Worksheets
- C. Worksheets and Charts ✓ **Correct answer**

Question 76 Computer

In Excel what is used to access restricted data by applying limits to show specific information ?

- A. Sort
- B. Search
- C. Filtering ✓ **Correct answer**
- D. Highlight

Note: Filtering — applying limits to show only specific data. Sort only orders data, search only finds it, and highlight only marks it.

Question 77 Mathematics

If a person earns 80000 and saved restricted data by applying limits to show specific

- A. 0.75 ✓ **Correct answer**
- B. 0.85
- C. 0.25
- D. 1.5

Note: VERIFIED by reconstruction — the stem as printed on the source page is garbled: 'If a person earns 80000 and saved restricted data by applying limits to show specific information ?' — its second half is a copy of Q76's wording, so no savings figure survives in the printed stem. The item is nevertheless recoverable, because the same option set (0.75 / 0.85 / 0.25 / 1.5) with the same printed key (0.75) is carried verbatim on test360 itself as a complete bank item: 'If a person earns 80,000 and saved 20,000, what is the percentage of money he spent?' (test360 'Math 2024 Test01' Q14 and 'Mathematics Part 8 2024' Q49, both keyed 0.75). Spent = 80,000 − 20,000 = 60,000, and 60,000 / 80,000 = 0.75. 0.25 is the saved fraction; 0.85 and 1.5 are wrong.

Question 78 Mathematics

If Azhar is twice as old as Babar and Babar is 3 years older than Aleem whose age is 4a , What is Azhar's age ?

- A. 6+8a ✓ **Correct answer**
- B. 3a+1
- C. 6+7a
- D. 3+2a

Note: 6+8a. Aleem's age is 4a, so Babar's is 4a + 3, and Azhar is twice Babar: 2(4a + 3) = 8a + 6, i.e. 6+8a.

Question 79 Mathematics

If the breadth of rectangle is 18m and its area is 666 sq meter find its length .

- A. 38

- C. 37 ✓ **Correct answer**
- D. 36

Question 80 Mathematics

$(0.49)^4 \times (0.343)^4 \div (0.2401)^4 = (7 \div 100)x+3$

- A. 1 ✓ **Correct answer**
- B. 7
- C. 3
- D. 4

Note: VERIFIED with a reproduction defect noted: as printed, '(7÷100)' cannot give x = 1, so '100' is a misprint for '10'. With the corrected base 7/10: $0.49 = 0.7^2$, $0.343 = 0.7^3$ and $0.2401 = 0.7^4$, so the left side is $((0.49 \times 0.343) / 0.2401)^4 = (0.7)^4 = 0.2401 = (7/10)^4$. Hence x + 3 = 4 and x = 1.

Question 81 Mathematics

A worker is paid Rs. 2130 for 6 days . If his total wages during a month adds up to Rs 9230 , Find the number of days he worked in the mouth ?

- A. 30
- B. 19
- C. 26 ✓ **Correct answer**
- D. 28

Note: 26. Daily wage = 2130 ÷ 6 = Rs. 355. Days worked = 9230 ÷ 355 = 26. (The stem spells 'month' as 'mouth' as printed.)

82 Mathematics

Ali has 20 football cards and Talha has 44 baseball cards . They agree to trade such that Talha gives Ali 2 baseball cards for every card lan gives to Jason . After how many such trades will lan and Jason each have an equal number of Cards ?

- A. 11
- B. 12 ✓ **Correct answer**
- C. 9
- D. 10

Note: 12. After n trades Ali has 20 − n + 2n = 20 + n cards and Talha has 44 − 2n + n = 44 − n. They are equal when 20 + n = 44 − n, i.e. 2n = 24, n = 12. (The stem garbles the names as 'lan' and 'Jason' where Ali and Talha are meant.)

The ratio between two numbers is 3:4 . If each number is increased by 3 the ratio becomes 4:5 . The difference between the numbers is :

- A. 5
- B. 1
- C. 3 ✓ **Correct answer**
- D. 9

Note: 3. Let the numbers be 3x and 4x. After adding 3: (3x + 3)/(4x + 3) = 4/5, so 5(3x + 3) = 4(4x + 3), 15x + 15 = 16x + 12, x = 3. The numbers are 9 and 12, and their difference is 3.
