Source note: doc4shares post 2332, 'FPSC Inspector Anti Narcotics Force (Past Paper 2010)' (9-page scan, Drive 1u21qXlip5zB6U90g5Vq5oruiXYol3W-K), accessed 13 Nov 2026. The Imtiaz Shahid FPSC book (Ed 61, 2026) carries this paper as Model Paper 117, p. 667. The 5 question pages were read visually; the answers are the solver's underlines on the scan, each verified against the fact (11 corrected by fact, confirmed by web search 13 Nov 2026). Q28 is not in the scan (numbering jumps Q27->Q29) and is a GAP; Q94 is DEFECTIVE (the underlined 7 days is mathematically impossible). Dedup 13 Nov 2026 vs the live library (1032 built files, 80,514 stems): direct stem comparison shows only 4 distinct exact overlaps with FPSC AD MOD 2019 (37aps) and 3 with FPSC AD IB 2018 batch-4 (37aro) — isolated generic GK items, a different sitting. Pairwise vs the 2011 Inspector paper (37atb): 0 exact and 0 first-8-words shared stems — the two Inspector papers are entirely distinct sittings. No live Inspector ANF paper exists in the index.

- A. 6 Rabbits
- B. 4 Rabbits ✓ **Correct answer**
- C. 8 Rabbits
- D. 10 Rabbits

rabbits (4 feet) and p = pigeons (2 feet): r + p = 20 and 4r + 2p = 48, so 2r = 8 and r = 4 rabbits.

Question 91 Mathematics

If a man stands upside down with his face towards South where will be his left hand point?

- A. East
- B. West ✓ **Correct answer**
- C. North
- D. South

Note: CORRECTED from the underlined A (East) to B (West). Standing upright facing south, the left hand points east; inverting the body (180° flip about the north-south axis) swaps the left hand to the west. Confirmed by Doubtnut (expert-verified) and Curioustab, 13 Nov 2026; the testpoint "still east" explanation confuses the hand's position relative to the body with its compass bearing.

Question 92 Mathematics

A party consisted of a man and his wife, their two sons and their wives and four children of each son. How many persons were there in all the party?

- A. 24
- B. 14 ✓ **Correct answer**
- C. 34
- D. 16

Note: Man + wife (2) + two sons and their wives (4) + four children of each son (8) = 14 persons.

93 Mathematics

If x + y = 10 and x - y = 4 then x^2 = ?

- A. 16
- B. 25
- C. 36
- D. 49 ✓ **Correct answer**

Note: x + y = 10 and x − y = 4 give x = 7, y = 3, so x^2 = 49. (The paper prints "xJ"; the J is a superscript 2.)

Question 94 Mathematics

If 4 men and 7 boys can do a work in 29 days, then 12 men and 8 boys will do the same work in:

- A. 9 days
- B. 8 days
- C. 7 days
- D. 10 days

No answer is given for this question, and none is taught. No correct option — DEFECTIVE-excluded (decided by assistant under owner's 8 Nov delegation; No correct option. The underlined 7 days is mathematically impossible: 29(4m+7b) = 7(12m+8b) gives 32m + 147b = 0, which has no positive solution for man/boy rates; 8 and 9 days are likewise impossible, and 10 days would need one man to equal ~31 boys. The work-rate numbers as printed admit no sensible answer.)

Question 95 Mathematics

A man starts climbing a hill. Every minute he ascends 20 yards but slips down 5 yards. How long will he take to ascend a 80 yards high.

- A. 5 min ✓ **Correct answer**

in 20 sec.

- C. 6 min
- D. None

Note: Net gain is 15 yards a minute. After 4 minutes he is at 60 yards; in the 5th minute he climbs 20 yards to 80 and reaches the top before slipping — 5 minutes.

Question 96 Mathematics

Point x is in North of point y and point y is East of point z. To which direction is point x with respect to z.

- A. North East ✓ **Correct answer**
- B. North
- C. East
- D. None

Note: y is east of z and x is north of y, so x is north-east of z.

Question 97 Mathematics

What is the probability of getting a sum 9 from two throws of a dice?

- A. 1/3
- B. 2/5
- C. 1/6
- D. 1/9 ✓ **Correct answer**

Note: Sum 9 from two dice: (3,6), (4,5), (5,4), (6,3) — 4 outcomes out of 36, i.e. 4/36 = 1/9.

Question 98 Mathematics

One neon sign blinks every 6 seconds. Another neon sign blinks every 8 seconds — after they will next blink together?

- B. 10 seconds
- C. 14 seconds
- D. None ✓ **Correct answer**

Note: The signs blink together again after the LCM of 6 and 8 seconds, which is 24 seconds; 24 is not among the options, so "None" is correct.

Question 99 Mathematics

A car washer man can wash 8 cars in 18 minutes. At this rate how many cars he can wash in three hours?

- A. 13
- B. 72
- C. 80 ✓ **Correct answer**
- D. 64

Note: 8 cars in 18 minutes; 3 hours = 180 minutes = 10 × 18, so 10 × 8 = 80 cars.

Question 100 Mathematics

Asif is 5 years older than his wife who is 5 times older than her daughter. If the daughter was 4 years old, 3 years back what is the age of Asif.

- A. 35
- B. 40 ✓ **Correct answer**
- C. 35
- D. 50

Note: The daughter was 4 three years back, so she is 7 now; the wife is 5 × 7 = 35; Asif is 35 + 5 = 40. (Options (a) and (c) are both printed as 35 — a print duplication; the keyed B is unaffected.)
